

eTrap[®] polyp trap

Inspired by nurses...

When US Endoscopy set out to design the ideal polyp trap, we interviewed numerous clinicians, formulating an impressive wish list. The result: a polyp trap that allows for quick and accurate retrieval, while safeguarding clinicians from unnecessary exposure to biomaterial. The eTrap[®] polyp trap offers the simplicity desired by clinicians and effectiveness both you and your patients deserve.

The eTrap[®] - a polyp trap designed with you in mind...

Removable specimen strainers provide:

- Little or no biomaterial exposure – no more sifting through fluid to locate a specimen
- Simple transport and preservation of intact polyp specimens – dip the tray in the specimen jar or brush with your fingertip, and the specimen will slide right out
- Ability to collect multiple polyps with uninterrupted suction - just alternate the trays
- Easy-grip design and a measurement guide inside each tray for accurate specimen identification

Collection chamber features:

- Magnifying window to easily visualize the collected specimen
- Clean design that cycles fluid into the main suction receptacle

For more information on the eTrap[®] polyp trap, contact US Endoscopy today.

product number	description	tubing	units/box
00711099	polyp trap	~ 15 cm long	25 units/box 2 strainers/unit
